SHOOT PROJECT BRINGS DIGITAL STORYTELLING TO SCHOOLS ACROSS EUROPE

The SHOOT Project continues to inspire schools across Europe by bringing together students, teachers and education professionals through a series of international webinars dedicated to digital photo storytelling.

Following the successful development of the SHOOT Digital Photo Storytelling Methodology, partners organised online training activities that introduced participants to innovative educational approaches combining photography, creativity and digital tools. The webinars marked another important milestone in the project, helping schools prepare for the practical implementation of immersive learning activities in the classroom.

Participants from the partner countries explored how digital photography can become much more than a visual medium – it can be a powerful educational language that encourages reflection, creativity, collaboration and active participation.

AN INTERNATIONAL LEARNING COMMUNITY

The webinar activities brought together participants from across the SHOOT partnership, strengthening cooperation between organisations from Italy, Spain, Greece, Poland and Estonia. One of the first national webinars took place in Greece on 9 December 2025, bringing together 25 teachers and students. Across the partnership, similar activities promoted the exchange of ideas, strengthened international cooperation and encouraged participants to explore new perspectives on digital storytelling, sustainability and active citizenship.

LEARNING THROUGH IMAGES AND STORIES

The webinar programme was designed as a progressive learning journey, guiding participants from the fundamentals of digital storytelling to the creation and dissemination of their own visual narratives.

During the sessions, teachers and students explored:

- the principles of digital storytelling and visual communication,
- techniques for building engaging and meaningful stories,
- photography composition and visual literacy,
- ethical aspects of creating and sharing digital content,
- practical digital tools supporting creative learning,
- inclusive teaching strategies that encourage every learner to participate.

NEXT STEPS

As the SHOOT Project continues to evolve, the knowledge shared during the webinars will become the foundation for future collaborative activities, classroom experiments and international exchanges.

The partnership remains committed to developing innovative educational practices that combine creativity, technology and inclusion, giving students new opportunities to learn, communicate and express themselves through the universal language of photography.
